

Vista Update will not update .NET frame 1.1

.NET 1.1 has been amended to work correctly with Vista.

This may solve the issue for those who are affected:

1. Download and run the Windows Installer Cleanup Utility, and remove the .NET framework 1.1 from the machine.
2. Download .NET framework 1.1 from the Microsoft website and install it
3. Reboot your machine, then install .NET 1.1 SP1 from the Microsoft website and reboot your computer again.
4. Then try to take the update once again.
